DETAILED ACTION

Response to Amendment

1. In response to the office action from 12/11/2006, the applicants have submitted an amendment, filed 4/16/2007, amending Claim 49, while arguing to traverse the previous 35 U.S.C. 101 rejection (*Amendment, Pages 9-10*). Due to the amendments, method claim 49 now recites an active step of generating an audio classification, which is a “useful, tangible, and concrete result.” Thus, in light of the amendments and the applicants’ arguments, claims 49-50 and 52-54 are allowable over the prior art of record for the below given reasons. Also, claims 55-56, 58-62, and 64-66 were indicated as being allowable over the prior art of record in the previous Office Action (*Pages 4-5*). The reasons for allowance with respect to these claims are repeated below.

Election/Restrictions

2. This application is in condition for allowance except for the presence of claims 19-26 and 44-48 directed to an invention non-elected without traverse (*see response from 9/29/2004*). Accordingly, claims 19-26 and 44-48 been cancelled.

Allowable Subject Matter

3. **Claims 49-50, 52-56, 58-62, and 64-66** are allowable over the prior art of record.

4. The following is an examiner's statement of reasons for allowance:

With respect to **Claims 49, 55 and 61**, the prior art of record fails to explicitly teach or fairly suggest a method, program stored on a computer readable medium causing a computer to execute a process, or system containing module components (*specification, Paragraphs [0049-0051]*) for music classification implemented using a multiple stage classifier comprising a first stage of support vector machine (SVM) classifiers each associated with a musical category such as a particular artist or genre, wherein input audio signal learning vectors are applied to each SVM classifier to produce a value indicative of how well or poorly the input audio signal vector conforms to a particular classification, and wherein the generated value from each of the classifiers is utilized in creating a metalearning vector, which is utilized at a neural network classifying stage to make a final classification determination.

Although Weare et al (*US 6,657,117*) mention determining a degree of similarity (distance) to a particular audio classification, such a similarity determination is made at a second classification stage and not at a first classification stage utilizing a SVM (*Col. 10, Line 65- Col. 11, Line 50*). Therefore, since the distance value determination taught by Weare does not occur in a first classification stage, Weare also fails to disclose the use of such values in creating a metalearning vector to be used in a final neural network classification stage.

Thus, Claims 49, 55 and 61 are allowable over the prior art of record.

Dependent claims 50, 52-54, 56, 58-60, 62, and 64-66 further limit allowable independent claims, and thus, are also allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
